

Improving Understanding the Impact of Ecosystem and Demographic Factors on the Recruitment of Atlantic Herring in the Southern Gulf of St. Lawrence

By: Jacob Burbank

Research Scientist

Fisheries and Oceans Canada, Gulf Fisheries Centre

About Me

- Studied at the University of Waterloo
- Completed a PhD in Biology under supervision of Dr. Michael Power and Dr. Andrew Drake (DFO-Burlington)
- Currently a Research Scientist at Fisheries and Oceans Canada, Gulf Region, Moncton, NB since mid 2022
- Enjoy biking, family hikes and camping

Why is Recruitment Important?

Low Recruitment: Big Problem

Eggs

Many eggs do
not get to
hatch

Larvae

Few young
survive to
catchable age

Recruits

Less adults

High Recruitment

More eggs
hatch
successfully

More larvae
survive

More adults

Identifying Factors Impacting Recruitment : Literature Review

- Upon arrival in Gulf Region, I commenced a literature review on Atlantic Herring Recruitment
- Examined research from North America and Europe
- Specifically examined the factors influencing survival at each early life history stage
- Worked to identify what abiotic and biotic factors are important for recruitment and knowledge gaps pertaining to our understanding of recruitment in the species

Received: 1 September 2022 | Revised: 7 November 2022 | Accepted: 15 November 2022

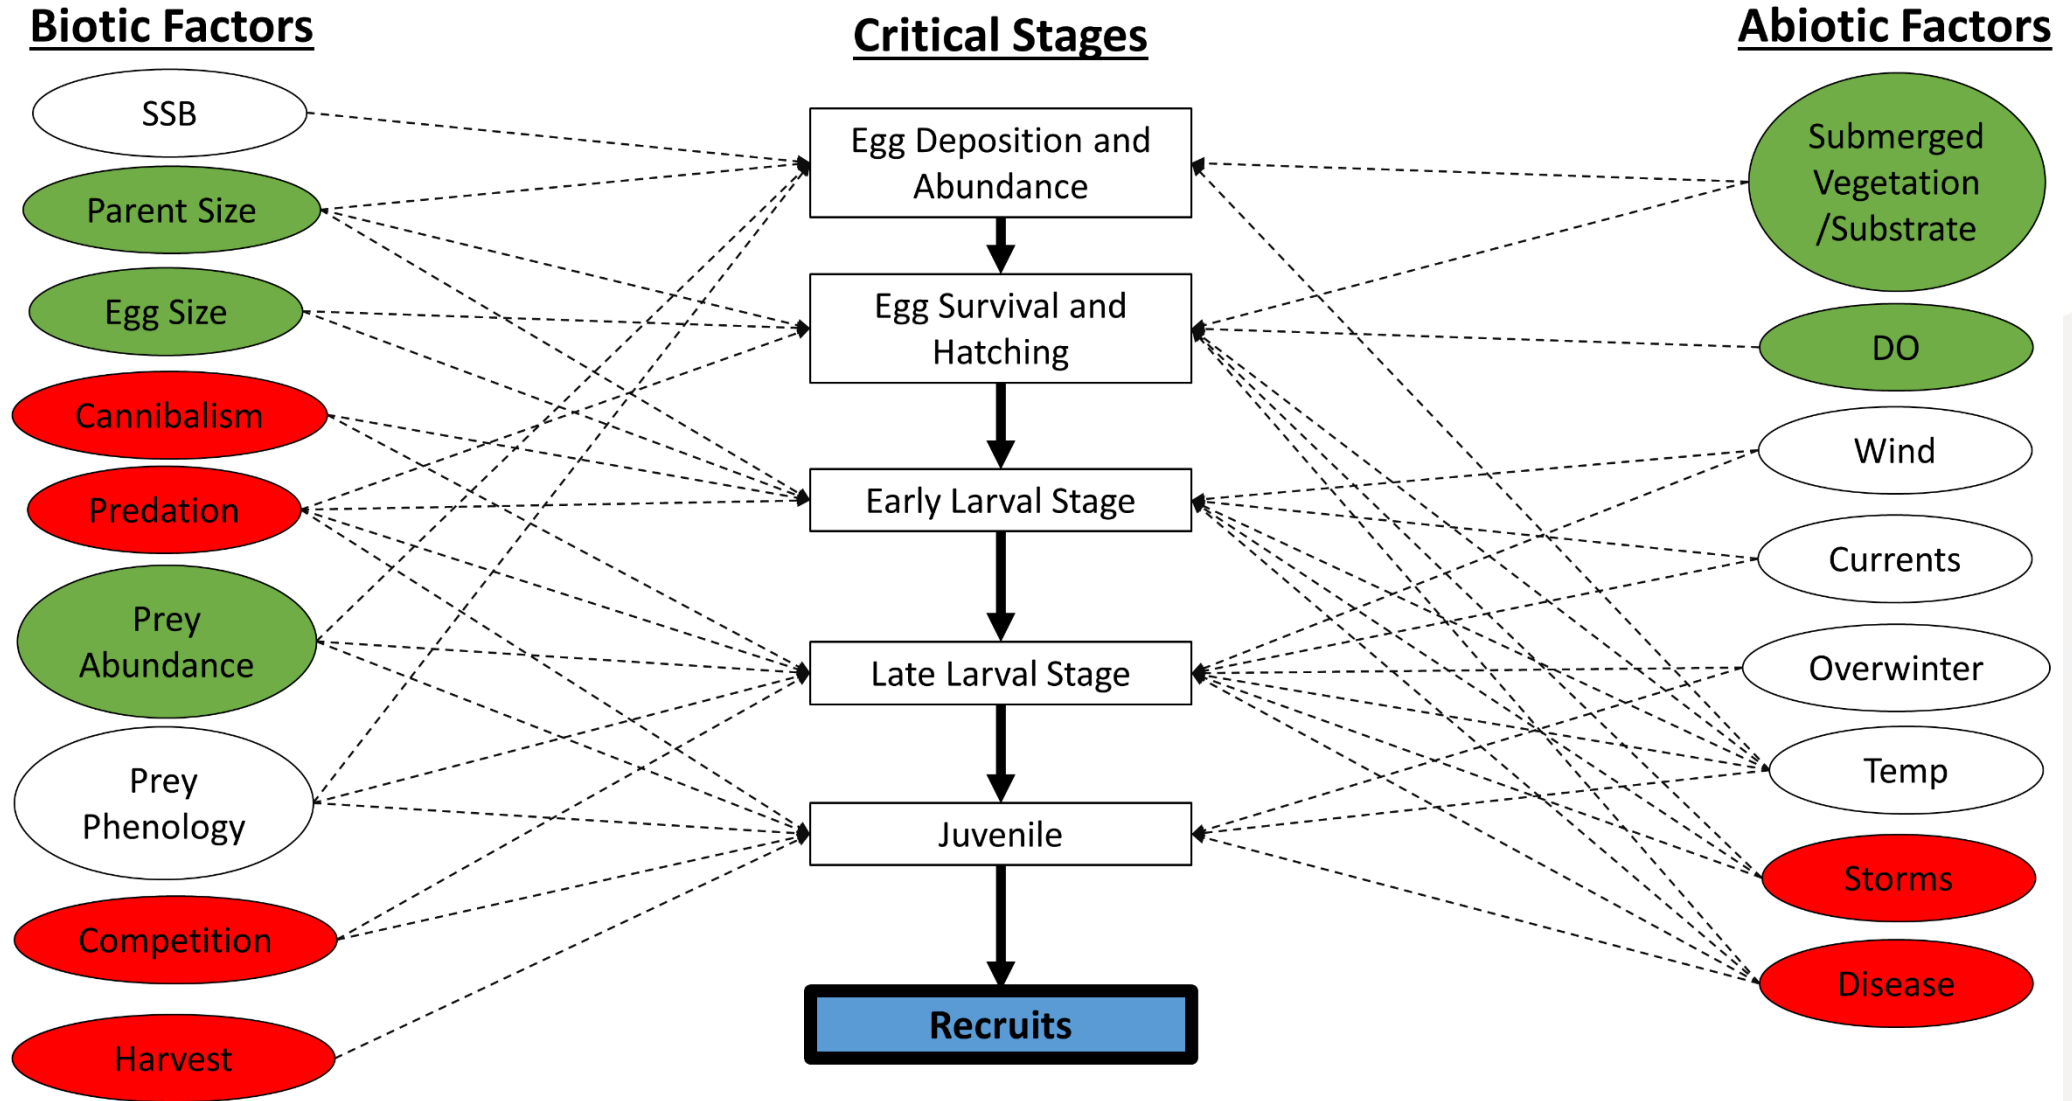

DOI: 10.1111/fog.12621

Understanding factors influencing Atlantic herring (*Clupea harengus*) recruitment: From egg deposition to juveniles

Jacob Burbank  | Rachel A. DeJong | François Turcotte | Nicolas Rolland

Identifying Factors Impacting Recruitment

- Determined there is not one specific factor dictating recruitment,
RATHER
- A wide range of abiotic and biotic factors act to produce observed trends in recruitment.
- Several important knowledge gaps remain:
 - The impacts of habitat quality on hatching success and early larval survival
 - The influence of prey availability and quality on the growth and survival of larvae
 - The relative importance of the variety of factors identified to impact recruitment of Atlantic Herring

Atlantic Herring Recruitment Modelling in sGSL

- Evaluate the relative influence of ecosystem (biological and physical) and demographic factors on the recruitment of Atlantic Herring
- Develop predictive models to estimate recruitment based on ecosystem conditions and stock structure in the year they were spawned
- Overall improve understanding of recruitment, which will improve confidence in stock assessments and the science advice provided

Symonds, M. R. E., & Moussalli, A. (2011). A brief guide to model selection, multimodel inference and model averaging in behavioural ecology using Akaike's information criterion. *Behavioral Ecology and Sociobiology*, 65, 13–21.

Herring Recruitment Modelling

Predictor type	Predictor	Spring spawning		Fall spawning	
		Recruits	Recruitment rate	Recruits	Recruitment rate
Prey abundance	WarmZoo	0.89	0.28	0.32	0.79
	ZDW	—	0.40	0.81	0.22
	LgCal	—	—	0.50	0.07
Prey phenology	CIVHypES	0.11	—	—	—
	CIVGlacF	—	—	—	0.16
	CICIVCFinES	—	0.21	—	—
	CICIVCFinF	—	—	0.95	0.55
Physical conditions	S10	0.66	0.41	—	—
	JuneSST	0.28	0.10	—	—
	AugSST	0.65	0.80	—	0.06
	OctSST	—	—	0.24	—
Demographic Factors	P8to11	—	—	0.06	—
	WeightatAge	0.20	0.19	—	0.42

- A combination of biological, physical, and stock structure factors impact recruitment
- Prey abundance, prey phenology, water temperature and adult weight-at-age seem most important
- Important to consider a range of factors simultaneously
- Future studies should develop approaches to understand impact of predation, storm events and currents on recruitment

A statistical framework for identifying the relative importance of ecosystem processes and demographic factors on fish recruitment, with application to Atlantic herring (*Clupea harengus*) in the southern Gulf of St. Lawrence

Jacob Burbank , François Turcotte, François-Étienne Sylvain, and Nicolas Rolland 

Fisheries and Oceans Canada, 343 Université Avenue, Moncton, NB E1C 9B6, Canada

What's Next

- This is a start and a valuable move towards estimating recruitment through an EAFM lens

BUT

- How to incorporate this type of approach formally into Stock Assessment....Integrated stock assessment model??

Thank You
